Supporting those affected by  
Inherited Metabolic Disorders

# Congenital Hemidysplasia with Ichthyosiform Erythroderma

Congenital Hemidysplasia with Ichthyosiform Erythroderma and Limb Defects is a rare disorder more commonly known as CHILD Syndrome. The disorder occurs almost exclusively in females and has symptoms, usually present at birth, that affect the development of one side of the body. CHILD Syndrome may cause limb deformities which appear in correlation with inflamed and scaly skin patches. The development of the heart and other organs may also be affected.
